### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Bailey in view of Leonard et al.

Leonard et al. discloses a method of providing an atmosphere with a volatile liquid material, comprising feeding of liquid volatile material to at least separate diffusion surface B from a reservoir A by means of a rod-like 12 liquid transfer member, the diffusion surface comprising at least one non-integral with a surface capillarity 13 and an extent sufficient to allow an appropriate evaporation, and being mounted on the transfer member 12 such that it extends essentially laterally therefrom. Leonard et al. does not disclose a non-porous sheet for the diffusion surface. However, Leonard et al. teaches the diffusion plate 40 that is a non-porous sheet with a surface capillary 48. Therefore, it would have been obvious to one having ordinary skill in the art to have provided the device of Bailey with a non-porous sheet for the diffusion surface as suggested by Leonard et al. Doing so would provide a way to dispense liquid.

### ***Allowable Subject Matter***

3. Claims 1-8, 10-20 are allowed.

***Response to Arguments***

4. Applicant's arguments filed October 06, 2009 have been fully considered but they are not persuasive in view of the Bailey and Leonard et al. references as indicated above.
5. Applicant's arguments with respect to claim 9 have been considered but are moot in view of the new ground(s) of rejection.
6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dinh Q. Nguyen whose telephone number is 571-272-4907. The examiner can normally be reached on Monday-Thursday 6:00-4:30.
